FirstDay Display Pro

PRODUCT BRIEF · WORSHIP PRESENTATION AND ANNOUNCEMENTS

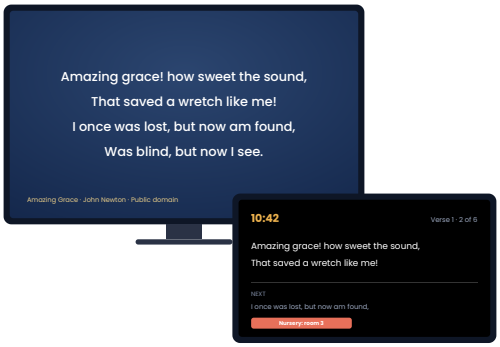

Run the whole service from one screen

FirstDay Display Pro puts your songs, Scripture, slides and announcements on every screen in the building, from one Windows PC, in a way any volunteer can learn.

Made for the way congregations worship

Much worship software is built for concert stages. Display Pro starts from what a congregation does when it meets: a song leader leads singing, someone reads Scripture, the preacher has a few slides, and the lobby TV shows what's coming up.

You build the order of worship ahead of time, then click through it. The congregation sees clean, readable lyrics. The song leader sees the next line and a clock. The lobby TV keeps showing announcements the whole time.

What's included

Songs and lyrics
One song library with lyrics and verse order. Import lyric files downloaded from CCLI SongSelect. Text sizes itself to fit each slide.

Scripture
Find a passage, choose the translation and put it on screen in seconds, split across slides so it stays readable from the back row.

Slide editor
Your own slides with themes, pictures, text and shapes placed anywhere, with readable contrast checked for you.

Service schedules
Plan the order of worship ahead of time and run it in order during the service.

Stage display
The song leader sees the current and next line, the clock, and alerts such as a nursery call.

Up to 8 audience screens
Named screens, each with its own content, such as the auditorium and a lobby TV, with a warning if one stops responding.

NDI output
Send the audience screen over your network to OBS, vMix, a video switcher or an NDI TV box, with no extra monitor.

CCLI song-use report
Display Pro keeps a record of every song you show and gives you a report ready to enter with CCLI.

Announcements included
Everything in Display Lite: announcements from your church email, categories, dates and lobby screens.

Easy for volunteers

- **Phone remote.** Move the slides and edit announcements from a phone, in its web browser. No app to install.
- **Accounts and roles.** Administrators and editors each have their own sign-in, with a list of signed-in devices and an activity log of who changed what.
- **Backups.** A copy every week, a second backup folder such as OneDrive or a USB drive, and all-or-nothing restore.
- **Screen check.** A warning when an audience screen stops responding, before anyone in the pews notices.
- **Training built in.** A 21-page how-to guide and 16 short captioned videos on the Help page.

Your computer, your data

Display Pro runs on your church's own Windows PC. Songs, slides, announcements, accounts and backups stay there, not on our servers. Because it runs locally, your screens keep working if the internet goes down. Other TVs and computers in the building show a screen through a web browser on the same network.

License renewals arrive by themselves: when a license nears its end date, Display Pro picks up the renewed code from the FirstDay website.

What you need

- A PC with 64-bit Windows 10 or 11, connected to your screens
- Any other TVs or PCs on the same network (optional)
- A FirstDay Display Pro license code (starts with FD1-)
- Your church's own CCLI license, for song reporting

Works with the rest of FirstDay

FirstDay Slides FREE

Preachers build slides at home in the free FirstDay Slides app, made from Display Pro's own slide editor. Save the file, copy it to the Display Pro PC, and open it, with no internet needed. It looks the same during worship as it did on the laptop.

FirstDay Display Lite

Lite and Pro share the same announcement board. Start with Lite for lobby screens and move up to Pro later; your announcements and slides come with you.

FirstDay Sites COMING SOON

The link is already built into Display Pro. Once Sites launches, approved announcements, the urgent notice, upcoming events, birthdays and the prayer list come from your church website to your screens on their own. Slides published from FirstDay Slides land in the right service's schedule, and the songs you show are logged on your website for song tracking and your CCLI report.

Get started

1. Email **hello@firstdaystudio.app** with your church's name for a license code.
2. Download Display Pro from **firstdaystudio.app** and follow the setup guide.
3. Watch the training videos and run your first service.

Pricing: see firstdaystudio.app/#pricing. Setup and training help and song library import are available on request.
